

## COMPANY OVERVIEW

We are CST Instruments Ltd; the Innovate UK and Horizon 2020 award-winning company, based in Letchworth Garden City Hertfordshire. We have developed and manufactured scientific instruments for accelerated testing of cement (CemTest) and freshly mixed concrete (ConcTest), with results being produced within minutes.

Our international team consists of experts from the construction industry and has great expertise in research and technology. We have identified a need for our instruments in the global market from the cost and time reduction it will bring to users, and so are dedicated to developing and producing our revolutionary testing instruments.

The CemTest and ConcTest instruments are manufactured in the UK to the highest standards, have already gone through EN accreditation, CE marking and trials with well-respected key industry players, and are ready for the international market.

Our instrument test results are comparable to BS EN 196-1 and BS EN 12390-1 prism and cube test and equivalent standards.

We recommend that our instruments are used in conjunction with traditional testing methods, our instruments are to provide an accelerated assurance of the quality of the cement and concrete being used prior to batching or pouring.

We also are in the process of developing new instruments to assist in concrete mix design to calculate volume of available aggregates according to required specification.

We would love to hear from you. For more information on our company and our instruments, please contact us at [enquiries@cstinstruments.com](mailto:enquiries@cstinstruments.com), by phone on +44 (0) 1462 412 024 or visit our website at [www.cstinstruments.co.uk](http://www.cstinstruments.co.uk).
